

Tabernanthe iboga cultivation or how grow your own Iboga plants

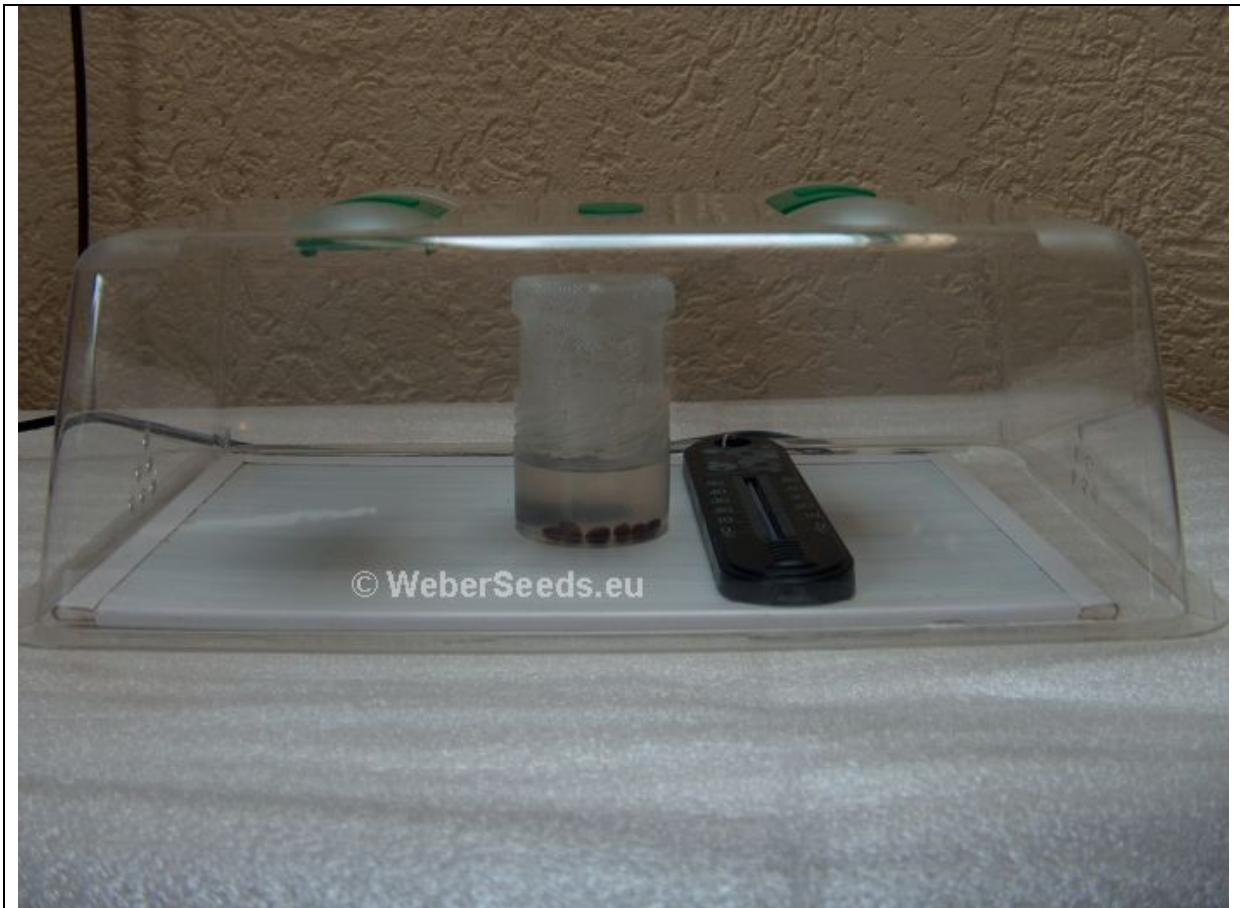

you need viable seeds

soak the seeds 24h in warm water Water temperature less than 40°C

we use a propagator with heating it's perfect

sow the seeds 1cm deep approx and cover with substrate...

... or vermiculite

this temperature is ideal

always keep it moist but not wet!

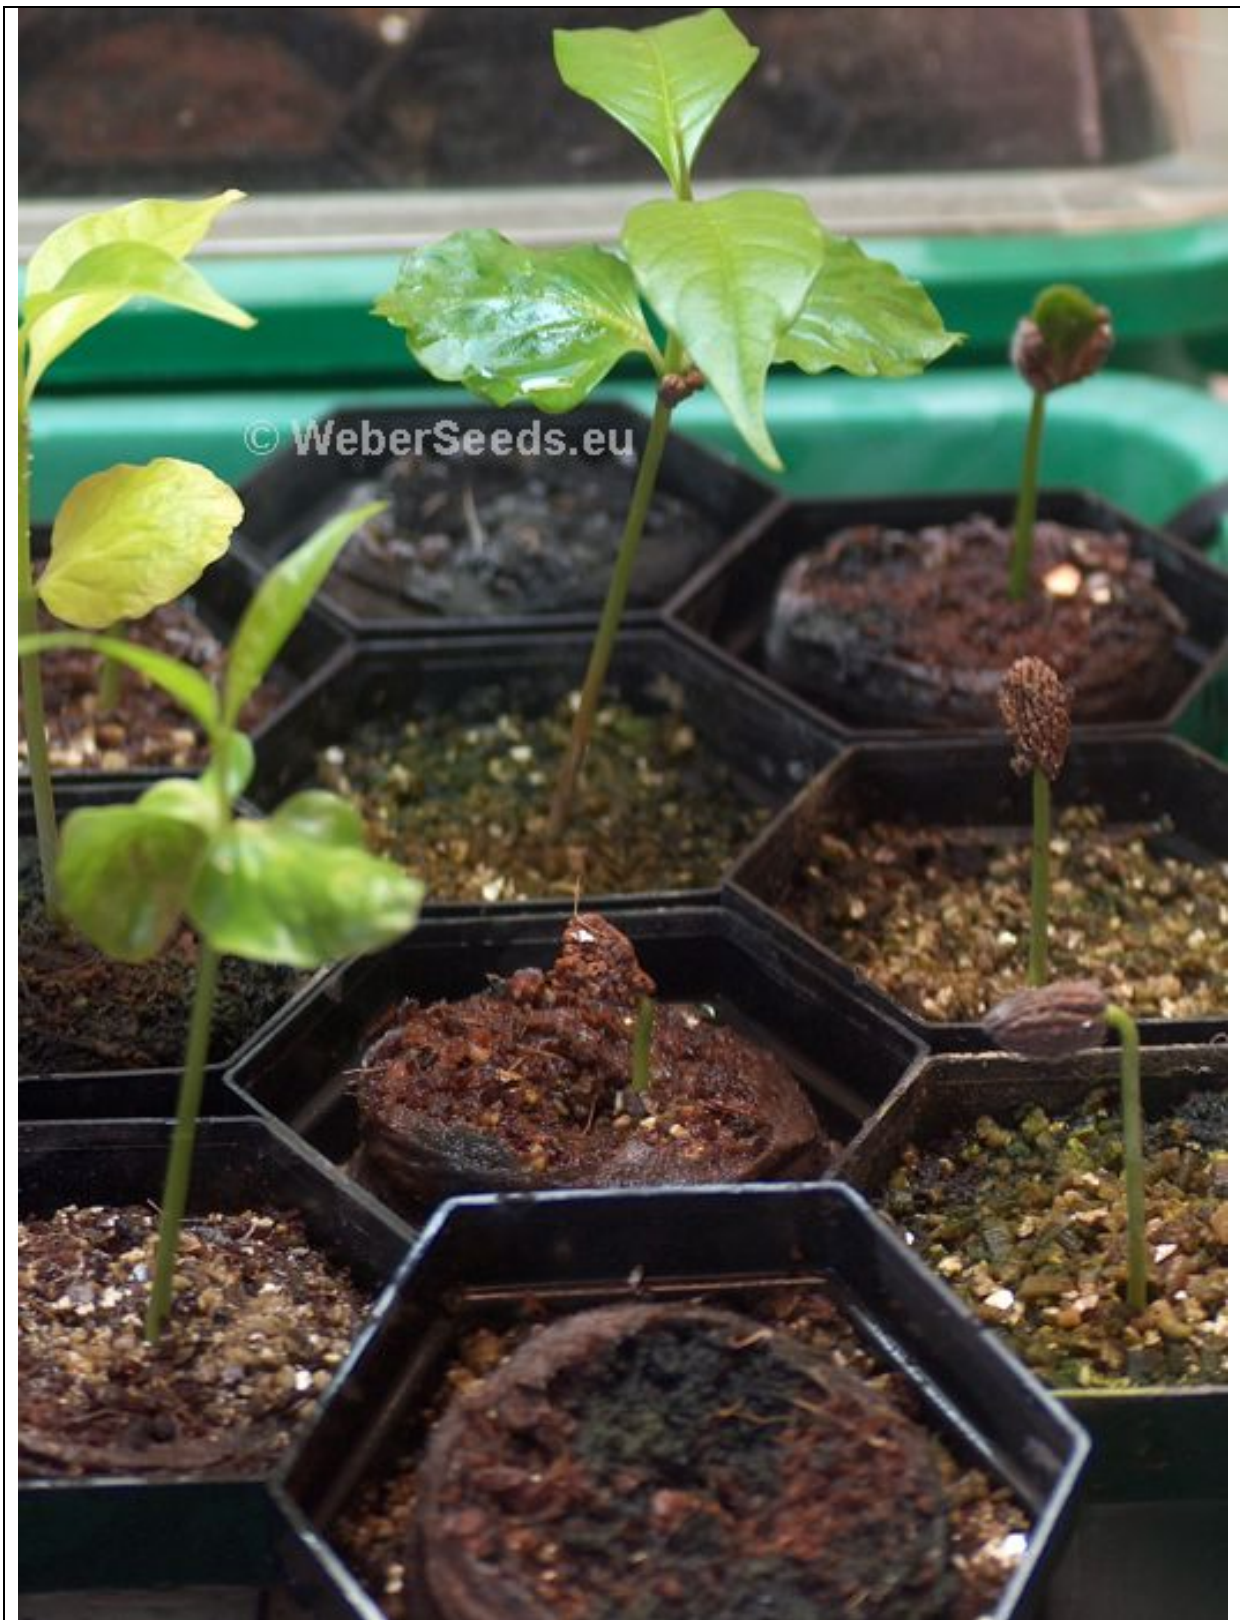

germination begins at the earliest after 2-3 weeks...

...and can last up to 6 months

4 weeks after sowing

3 months after sowing

2 years later

4 years later...flowering
